

Flexibility to set for your own home

Sensing module integrated
Use dip switch to set your own mode

Motion sensing

Daylight sensing

Set own mode

Energy saving

Wide coverage

High sensitivity

Auto-off

EyeComfort

Detection area	Holding time		Daylight mode
1	2	3	4
100%		5 second	ENABLE (default)
50% (default)		1 min	DISABLE
Detection area can be enlarged by selecting 100% here (the switch).		3 min (default)	Enabling daylight mode means light will only detect motion when the ambient brightness is less than 20lux. Disabling daylight mode means light will detect motion day and night.
		10 min	
Light will auto-off when motion is detected, auto-off after you set holding time and no motion detected.
