

PWM splitter - smart fan cable

Introduction

Combining the power of a PSU molex connection with the versatility of a PWM motherboard connection for the very first time the Akasa AK-CB002 is a unique product furthering the cause of quiet efficient computing.

Supporting three PWM fans from a single motherboard header makes this the ultimate fan splitter for today's low noise performance systems. Case fans and watercooling radiator fans can now benefit from smart and precise PWM control alongside the CPU fan. Utilising the intelligence of PWM for three fans enables multi fan connection and usage of more powerful fans while allowing their speed to be synchronized with CPU load. RPM feedback for the motherboard is provided from a connector marked CPU fan.

Combined with akasa **Smart Fan** series fans (PWM enabled) it is a smart and easy solution for building quiet performance systems.

Features

- Simple solution for quiet and smart fan control
- Synchronizes three PWM fans with PC CPU usage
- All connectors labelled for easy connection

Specification

Cable length	30cm
PSU connector	4-pin Molex (peripheral)
Fan connector	3 x 4-pin PWM (one with RPM feedback for motherboard)
Product code	AK-CB002

Includes

- cable adapter

Smart System Cooling Ak-CB002

connect to motherboard

connect to PSU

PWM CPU cooler

PWM case fan

PWM case fan
